OLSR for Mac OS X

Preparing Mac OS X

- Go to Configuration -> Network

- create a new environment

  (z.B. Funkfeuer)

- Set the TCP/IP-Area to:

1. **IP-Address:** IP-addresses will be supplied via Peg-HCP
2. **Router:** leave empty
3. **DNS-Server:** Use some public DNS-Server (e.g. from this list).
4. **Apply** and restart if necessary.

Installing and running OLSRd

- **Version 0.60**

1. **OLSRd-binaries** should be available at the Summit.

   -> In the Programs directory, there should be *start-olsrd.sh*.
2. Run in **Terminal**.

   -> The Terminal is in Programs/Utilities, or just find with **Spotlight** (CMD+Space ->Terminal).
3. Choose **Mode** 0,1 or 2 and enter Username [ENTER].

Choose Network

In the menubar go to the wireless-icon and choose the network.
